

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
Elizabeth Evans

Rescue, CA 95672

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
Sandra Joos

Portland, OR 97212

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
April Atwood

Lake Oswego, OR 97035

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
William O'Brien

Portland, OR 97232

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
Kurtis Hough

5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
James Nielson
8125 NE Wygant St
Portland, OR 97218

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
Sheila Dooley
3300 Vensel Rd
Mosier, OR 97040

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Nehalem, OR 97131

Dear Commissioners and Staff,

I urge the Commission to back up its promises and adopt climate policies now.

Without delay, Update fish and wildlife habitat protection based on the best available science.

Expand protective buffers around salmon-bearing streams and other sensitive wildlife sites.

Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.

Prohibit conversions of forest land to agricultural land.

Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.

Adopt energy efficiency standards for new dwellings.

Enforce Gorge protection laws. Don't leave it up to citizens or the counties to carry out the Commission's mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Sincerely,
Jackie Johnson
PO Box 41302

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
Rachel Heath

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Dear Commissioners and Staff,

My highest priority is for the Commission to create objective criteria for those of us that own property in the NSA. The past manner in which visual subservience has been applied has been very subjective, and does not use already approved Federal Government measurement techniques.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. Wasting time on Climate Change by the the Commission staff detracts from their responsibilities defined in the act originally adopted in 1991

Please prioritize the following issues in plan review.

1. Create objective criteria for land use change applications.
2. Do not adopt a climate action plan as the science of proclaimed Climate Change people does not meet the definition of science and global issues should be outside the purview of the Commission
3. Do not Update fish and wildlife habitat protection without first considering the residents that live within the NSA areas and how our rights are being denied.
4. Consider urban expansion to offset areas taken by the tribes and conservancies that are in the NSA purview and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
5. No not prohibit conversions of forest land to agricultural land, as this is a further erosion of owner's property rights.
6. Do not limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
7. Do not adopt energy efficiency standards for new dwellings as this is outside the purview of the Commission.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your originally defined role as protectors of our national treasure.

Sincerely,
Peter Leon

Dear Commissioners and Staff,

Dear Ms. Connie,

I urge you to update the Columbia Gorge Management Plan in a way that will protect the habitats for plants, wildlife, stream and river health, and future generations. Climate change will continue to wreak havoc with the health and well-being of this crucial scenic treasure.

Thank you for your thoughtful consideration of this important matter.

Sincerely,

Susan Blackman

Portland, OR 97203

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing beautiful landscapes and wonderful variety of animals and their habitats as well as home for thousands of people who live and work in the gorge. Finding the balance between the desires of special interest groups funded with outside money and those of residents who pay taxes and raise families here can be a tough.

I urge the Columbia River Gorge Commission to ensure that the livelihood and property ownership rights of residents are maintained and not further burdened by special interest.

Friends of the Gorge and others are applying a lot of pressure around policy change to address climate change and again, I urge the Commission to listen closely to those of us who have our primary homes in the gorge, raise our families here and pay taxes locally. Increased regulation on our property and on our businesses and civic agencies adds great burden on residents and our local rural counties.

Please consider the following issues in future plan review.

- Do not allow fish and wildlife habitat protection to further impact local resident use of our natural resources and recreational spaces. Protecting Fish can take other forms other than loss of access or use of public and private land.

- Allow urban expansion and promote growth in our small rural communities so that we can thrive and be allowed a successful future. Development within our already extensive regulatory framework is very burdensome and expensive and already discouraging growth. This then then hurts our counties tax revenues that allow our communities to stay alive. When regulations don't allow growth, tax revenues can't keep up with inflation and we see the impacts to school districts, EMS, Fire, roads, sheriff's office, etc. We MUST be allowed to grow to stay alive.

- Allow new primary residential dwellings within forest zones, especially small woodland zones to allow our communities to grow and increase our tax base.

- Do not increase energy efficiency standards for new dwellings. Residents can't afford further expenses added to our housing.

Thank you for considering these comments. I urge the Commission to ensure you fulfill your requirement to protect economic development for our residents and communities and to stand up to special interest groups.

Thank you

Sincerely,
Dan Fuller

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
Steven Woolpert
185 NE Snohomish Ave

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, of special concern is salmon habitat because of their sensitivity to temperature changes.

Policies developed 30 years ago do not fit today's needs.

Please come through with promises to adopt climate change policies to protect as best you can this very sensitive treasured area of our planet.

Sincerely,

Emily Herbert

2120 NE Halsey St

Portland, OR 97232

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. Dear Commissioners and Staff,

I'm not exactly sure what to say. I'm just perplexed at the commission's lack of action. You have to know your failure to act in protecting the gorge & its wildlife is a truly harmful decision, yet here you are focusing on the wrong agenda. Sounds like all of you need to stop a minute & take inventory on what really should be happening.

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
Polly Wood
408 Cascade Ave
Hood River, OR 97031

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Dear Commissioners and Staff,

We have an obligation to our region and people and future generations to protect to protect our vital and precious resources along the Columbia in particular. The commission must do far more than the minimum of polite tolerance of public input from local area citizens who like them will be impacted adversely far into the future by over accommodation to commercial interest above the public good and protection of our sustainable resources and environment.

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.

5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.

6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a "Transfer of Development Rights" program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don't leave it up to citizens or the counties to carry out the Commission's mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
Monica Zazueta

Dear Commissioners and Staff,

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.
2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.
3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.
4. Prohibit conversions of forest land to agricultural land.
5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.
6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a “Transfer of Development Rights” program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don’t leave it up to citizens or the counties to carry out the Commission’s mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

Sincerely,
Sunrise OMahoney

Portland, OR 97202

Dear Commissioners and Staff,

I live in Vancouver, WA and the Columbia Gorge is precious to me, as it is to all who live in this region. I support the Gorge Commission to insist that staff take long overdue action to protect our Gorge with a viable and current climate action plan that includes policies that take meaningful steps in its Management Plan to follow through on its commitments to citizens to protect, not allow further harm, to our Columbia River National Scenic Area.

Recommending NO Changes to the Management Plan to address climate change adaptation is a travesty that simply must be corrected.

Expanding commercial uses and facilitating more urban expansion are not consistent with the critical role this Commission can and should play to ensure climate protection is a priority and protection is the mandate, not an afterthought.

The Columbia River Gorge National Scenic Area is a natural treasure containing important habitat for many threatened species, including 12 stocks of salmon listed under the federal Endangered Species Act. These species are further endangered by the effects of climate change on their habitat. This is particularly true for salmon habitat, as stream flows decrease and water temperatures increase to the point of being lethal for endangered salmon runs.

For the past three years, the staff of the Columbia River Gorge Commission has repeatedly assured the public that climate adaptation policies would be a major focus of its review of the Management Plan, called Gorge 2020. The Commission staff assured the public that everything would be viewed through the lens of climate impacts. Yet, as plan review approaches its conclusion in August of 2020, the Commission has failed to develop one single policy change to address the effects of climate change. The Commission has instead invested its resources on expanding economic development, allowing more commercial uses, and facilitating urban expansion.

Climate adaptation and mitigation policies are necessary to fulfill the purposes of the National Scenic Area Act and improve protection of the outstanding resources of the Gorge. The plan was originally adopted in 1991 and many of its policies are out of date and do not represent the best available science.

For example, stream buffers in the General Management Area were adopted more than 30-years ago and are inadequate for providing protection of critical habitat for endangered salmon. Salmon habitat protection in the Special Management Areas and on federal forest lands is far more protective and is based on the best available science. Management recommendations for stream protection developed by the Washington Department of Fish and Wildlife that apply elsewhere in Washington are far more protective than the minimal stream buffers that apply in large areas of the National Scenic Area.

I urge the Commission to back up its promises and adopt climate policies now.

Please prioritize the following issues in plan review. There should be no delay in adopting these climate adaptation policies.

1. Adopt a climate action plan to better protect resources. This can always be periodically updated with new information after plan review and revision is completed.

2. Update fish and wildlife habitat protection based on the best available science. This includes expanding protective buffers around salmon-bearing streams and other sensitive wildlife sites.

3. Stop urban expansion and promote growth in existing urban areas boundaries as required by the National Scenic Area Act.

4. Prohibit conversions of forest land to agricultural land.

5. Limit new dwellings within forest zones, especially small woodland zones where new dwellings are currently allowed outright.

6. Adopt energy efficiency standards for new dwellings.

After plan review, the Commission should prioritize the development of a "Transfer of Development Rights" program to avoid the climate impacts of dispersed residential development on resource lands and encourage growth to occur in existing urban areas, as required by the purposes of the National Scenic Area Act.

Additionally, the Commission needs to prioritize enforcement of Gorge protection laws. Don't leave it up to citizens or the counties to carry out the Commission's mandatory role to enforce violations of the Scenic Area Act. Land use and environmental policies are worthless unless they are properly applied and enforced.

Thank you for considering these comments. I urge the Commission to get back on track and fulfill your role as protectors of our national treasure.

You are our first line of defense, and we urge you to direct your staff to develop and implement specific climate action policies and updated protections as part of its Management Plan that will ensure our Gorge has the most up to date, science-based oversight possible.

Sincerely,
Cathryn Chudy
