

**DEVELOPMENT REVIEW APPLICATION FORM
FOR COLUMBIA RIVER GORGE NATIONAL SCENIC AREA DEVELOPMENT REVIEWS
IN KLICKITAT COUNTY, STATE OF WASHINGTON**

This application is based on the Development Review Application Requirements as set forth in Chapter 350-81-032 – Application for Review and Approval, Columbia River Gorge Commission Administrative Rules. This application form, which follows, is lengthy because it reflects all types of applications. Many requirements may not be applicable to your development review application.

Generally, the application you submit will consist of two documents. One is this form, which serves as a checklist for all the information that needs to be initially provided. Two, is the site plan. The site plan will contain all the maps, diagrams (including elevations) and notes required by this form. Both this form and the site plan must be submitted in digital format and paper format. A site plan may be submitted as one single sheet or a series of sheets, each with different information presented in a logical and clear presentation.

Please bear in mind that this only reflects information requirements needed to submit a formal application. Staff will conduct research and analysis based on all applicable requirements in the Administrative Rule. Additional information may be required. Submitting the information to file this application does not grant or imply approval of the development review application.

This application must be deemed complete and accepted by the Executive Director, or designee, of the Columbia River Gorge Commission before the application can be accepted, a formal file number can be assigned and a formal review process can begin.

You must consult with Gorge Commission staff during the application process. Please don't hesitate to contact us and set up an appointment. This is our contact information:

The farm or ranch must currently satisfy subsection (h)(C)(iv) below.

(C) The farm or ranch is a commercial agricultural enterprise as determined by an evaluation of the following factors:

(i) Size of the entire farm or ranch, including all land in the same ownership.

(ii) Type(s) of agricultural uses (crops, livestock) and acreage.

(iii) Operational requirements for the particular agricultural use that are common to other agricultural operations in the area.

(iv) Income capability. The farm or ranch, and all its constituent parcels, must be capable of producing at least \$40,000 in gross annual income. This determination can be made using the following formula: $(A)(B)(C)=I$ where A=Average yield of the commodity per acre or unit of production; B=Average price of the commodity; C=Total acres suitable for production, or total units of production that can be sustained, on the subject farm or ranch; I=Income capability.

Chapter 350-81-190(i)
On lands designated Large-Scale Agriculture, a second single-family dwelling in conjunction with agricultural use when the dwelling would replace an existing dwelling that is included in, or eligible for inclusion in, the National Register of Historic Places, in accordance with the criteria listed in 350-81-540(1)(e).

Chapter 350-81-540(1)(e)
Cultural resources are significant if one of the following criteria is satisfied:

(A) The cultural resources are included in, or eligible for inclusion in, the National Register of Historic Places. The criteria for evaluating the eligibility of cultural resources for the National Register of Historic Places appear in the "National Register Criteria for Evaluation" (36 CFR 60.40).

(B) The cultural resources are determined to be culturally significant by an Indian tribal government, based on criteria developed that Indian tribal government

	and filed with the Gorge Commission.

the following steps and subject to the following additional guidelines:

(A) A Stewardship Plan shall be submitted and deemed complete by the Executive Director and submitted to the Forest Service for review. (350-81-270(2)(y)(C).

(B) Clearing trees for new agricultural use shall be limited to 15 acres.

(C) If the Stewardship Plan proves that the above guideline is detrimental to the proposed agricultural use, the final size of the clearing shall be determined by the application of 350-81-270(2)(x)(D)(i-iv) below and subject to guideline 350-81-270(2)(x)(I).

(D) After a 30-day public comment period, the Forest Service shall review the Stewardship Plan using the following criteria:

(i) Scenic Resource guidelines in 350-81-270(2)(y)(D)(i) and (vii).

(ii) Applicable guidelines of 350-81-550, 350-81-600 and 350-81-620.

(iii) The Natural Resource Conservation Service (NRCS) soil unit description shall indicate that soils are suitable for the proposed agricultural use. The woodland management tables shall be used as part of the analysis of suitability for both agricultural and forest uses.

(iv) The size, shape and pattern on the landscape of the clearing for the new agricultural use shall blend with the surrounding landscape pattern either because the existing pattern includes agricultural openings or because the new agricultural opening is designed to appear natural.

(E) The Forest Service shall send the review statement to the Executive Director. The Forest Service shall state whether or not the new agricultural use should proceed including any conditions that are recommended to be required by the

Construction Specifications

Reference Number: 03-10-1100-00

Design Flow: 300 G.P.D

03-10-1100-00/00

Construction Notes:

- The contractor shall not perform work without inspections where inspections are required.
 - Requests by the contractor of changes to the plans must be approved by the designer and regulator before the changes are implemented.
 - Green insulated 12-gauge copper toning wire approved for direct bury shall be placed in all trenches where sewer pipe has been laid.
 - Construction shall conform to requirements set forth by the Washington Department of Environmental Quality on-site sewage disposal rules chapter 340-divisions 71 and 73, as well as the Uniform Plumbing Code, and the project specifications. Whenever there is a conflict between these requirements, the most stringent shall apply.
 - All pressure sewer pipe shall be schedule 40 PVC pressure pipe unless otherwise noted on plans.
 - Installer must maintain a state-issued license from the Washington Department of Environmental Quality throughout all phases of installation.
 - The system designer offers no warranty, express or implied for the system or its components' functionality. Some materials may have limited warranties provided by the manufacturers.
 - It is the responsibility of the installer to obtain any necessary utility locates prior to beginning work. Utilities, underground or otherwise, may exist in any given location on or adjacent to the project site. Additionally, other obstacles may exist, including but not limited to tree roots, boulders, bedrock, or groundwater, and may require reconfiguration of components or system redesign, if encountered during installation.
 - The installer will be responsible to maintain and verify all required setbacks. If it appears that applicable setbacks will not be met, or if locations of property corners, lines system components, buildings, etc. are not clear, the installer will verify these items prior to installation.
 - All Materials must be installed per individual manufacturer's requirements.
 - The system owner is solely responsible for the continued operation and maintenance of the installed system. For this Alternative Treatment Technology system, an operation and maintenance provider must be contracted for regular, ongoing servicing. The system installer must provide a copy of the approved system design to the system owner.
- General Notes:**
- Do not dispose of toxics or chemicals into system (e.g., restaurant degreasers and cleansers, wax stripper for linoleum, carpet shampoo, or any other toxic waste products that may harm the treatment process.)
 - Once a facility is placed into operation, the flows and waste strengths to the facility should be monitored. If flow or any of the influent waste strengths exceed those listed in the design, measures should be taken to reduce these parameters to those listed on the plan set. Otherwise additional treatment capacity and plant expansion will be necessary.
 - A certified service provider should be contracted to perform normal recommended maintenance.
